1.4	**MULTI ASSIGNMENT**	Option which allows to assign more than 1 trap to 1 button. **YES** – allows multi assignment **NO** – switches off multi assignment and allows to assign 1 relay to 1 button only.
		
		E.g.: If the multi assignment is activated, we can assign traps 1 and 2 to the button A, so when the A button on the remote control is pressed both traps are thrown simultaneously. On the main display if we assign two traps to 1 button, it looks following (e.g. we can assign two traps to A button):
		
		`L:1.1    AABCDEFG`
		`C:0`
		
		But if we have Multi Assignment deactivated but have two times A like on the picture above, only the first A trap will be thrown.
		
		Up to 8 traps/relays could be assigned to 1 letter.

1.5	**TELEMETRICS**	Switches off/on the option of receiving data about the state of the trap to the remote control. When telemetry option is off, the status information (number of targets, voltage) will not be available for transmission. To change the value, use the **CHANGE** button (**YES/NO**). To confirm, click **SAVE/NEXT**. When telemetry is activated the red LED will blink on the PCB above the display
